

1861.

QUEENSLAND.

SECOND ANNUAL REPORT

ON

REGISTRATION OF BIRTHS, MARRIAGES, AND DEATHS.

Ordered by the Executive Council to be Printed, 8th April, 1862.

THE REGISTRAR-GENERAL to THE HONORABLE THE COLONIAL SECRETARY.

Registrar-General's Office,
Brisbane, 21st March, 1862.

SIR,

I do myself the honor to forward to you for presentation to Parliament, the Second Annual Report on the Registration of Births, Marriages, and Deaths, for the year ending 31st December, 1861, accompanied, as on the last occasion, by a few introductory remarks and by some tables compiled for the further explanation of the subject, intended to save time and trouble to those who may desire statistical information.

2. Some delay has arisen in the preparation of this document from causes I hope not likely to occur again: I allude to the unfortunate accident to the Deputy-Registrar, by which I have been deprived of his valuable assistance; and, secondly, to the non-arrival of the returns from the district of Rockhampton, which should reach me early in the month of January, but did not do so until the 15th of the present month.

3. The particular branch of Statistics to which this Report and the tables appended to it have reference, viz.:—Population, its productiveness; its rate of increase or of decrease; the proportion of the sexes; the duration of human life; the sanatory condition of the colony, and of its various towns and districts, comprised under the general name of Vital Statistics; is in this country of scanty population well deserving of attention.

4. The civilization of States may to a certain extent be estimated and measured by the value its citizens attach to human life—the deeper they are sunk in barbarism the less regard do they pay to it; the progressive increase in the value attached to it is evidenced as civilization advances by the numerous laws enacted to restrain or entirely forbid the pursuit of occupations injurious to health; until at last it is recognized to be the duty of Government to protect its subjects as far as possible from the insidious attacks of disease, equally as from the assaults of crime, or from accidents. That any human laws or regulations will be sufficiently perfect to effectually attain these ends is not of course to be expected; but neither can it be disputed that the evils arising from man's bad passions, ignorance, or folly, are susceptible of much mitigation, and that the State which best does this is the first in the race of civilization.

5. Before the Government of any country can enter into a consideration of the sanatory condition of its subjects, and make laws and regulations for the protection of their health, it must be possessed of reliable information on which to act; to supply this information is the duty of the Statist, and although this colony—blessed with a healthy climate, and as yet possessing only a scattered population in the full enjoyment of all the necessities and most of the luxuries of life—may not yet require the enactment of Sanatory Laws, there is still little doubt that as population increases they will become necessary, and the value of these records will then be apparent.

6. Circulars have during the past year been sent from this office to the different District Registrars, asking them two questions—first, if they thought the provisions of the Registration Act were wilfully evaded; and secondly, if they experienced much difficulty in obtaining the required information. To the first question the reply is satisfactory, few are believed wilfully to neglect the Registration of Birth or Death, although some, particularly amongst foreigners, do so from ignorance. The reply to the second question is not so satisfactory, much difficulty is experienced in obtaining correct information, especially in the

in the country, the reason is clearly stated by one of the District Registrars, who says—“When it is considered that this is a Pastoral District, that many of the persons at sheep stations have no communication with the towns for months, or with the head stations for weeks, that fully one-third of the laboring class are Germans or Chinese, and that in most instances the information is necessarily transmitted through the superintendent or proprietor, it will appear quite possible that many Births and Deaths occur which I never hear of.” The inference from this reply is obvious, and suggests as a remedy that all tenants of the Crown should be required to take note of every Death or Birth occurring on their leaseholds, and to supply the District Registrar with the necessary information. The Germans are the principal sufferers by the above neglect, and as they as a class, look, even more anxiously than do our own countrymen, to ultimately becoming landed proprietors, they should be assisted as much as possible in the Registration of Birth or Death.

7. Having in my first Annual Report brought down the Statistical Records of the colony, as far as the materials at my command would permit, to the 31st December, 1860, I do not consider it necessary on the present occasion to go over that ground again, I have therefore confined this Report to the result of last year's Registration, introducing only such tables as are required to enable comparisons to be made with those of the previous year, 1860.

8. The population of the colony first deserves attention, and it is satisfactory to be able to report a large annual increase. On the 31st December, 1860, it is estimated to have been 29,074 souls, consisting of 17,427 males, 11,647 females. On the 31st December, 1861, it is estimated to have been 34,367 souls, consisting of 20,811 males, 13,556 females; the increase during the year is therefore 3,384 males, 1,909 females, total increase 5,293.

9. The Census taken on the night of the 7th April, 1861, is the groundwork of both these calculations; in the one case deducting the excess of Births over Deaths, and of Arrivals over Departures, which occurred between the 31st December, 1860, and the following 7th April; in the other, adding the increase arising from the same causes between the 7th April, and the following 31st December, 1861. To do this correctly it was necessary to reduce the population of the 7th April to some quarterly period of the year, and I have done this by deducting from the population of the 7th April, the estimated increase from all causes, which, taking the average of the first quarter of the year as a guide, may be reasonably presumed to have arisen in the week between the 1st and 7th April, the estimate is thus made to 31st March, and by deducting one quarter's, or by adding three quarters' returns, the population of either 31st December, 1860, or 1861, is arrived at. By making the calculation in this manner I have reduced the chance of error to the shortest possible period, namely one week, the calculation will be as follows:—

	Males.	Females.	Total Increase.
First quarter, 1861, excess of Births over Deaths	89	115	204
Ditto ditto Arrivals over Departures	556	155	711
Total increase for first quarter, 1861	645	270	915
Average increase for one week is therefore	49	21	70
Total increase from 1st January to 7th April, 1861	694	291	985
Population as per Census 7th April, 1861	18,121	11,938	30,059
Deduct increase between 1st January and 7th April, 1861	694	291	985
Population on 31st December, 1860	17,427	11,647	29,074
Population as per Census 7th April, 1861	18,121	11,938	30,059
Add increase between 7th April and 31st December, 1861	2,690	1,618	4,308
Population on 31st December, 1861	20,811	13,556	34,367
Deduct population on 31st December, 1860	17,427	11,647	29,074
Annual increase for the year 1861	3,384	1,909	5,293

10. It therefore appears that the population has increased during the year 1861 at the rate of 18·21 per cent. On the 30th December, 1859, the population is estimated to have been 26,038—15,664 males, 10,374 females, it therefore increased during the year 1860 by the addition of 3,036 persons—1,763 males, 1,273 females, or at the rate of 11·66 per cent. The total increase since Separation has therefore been at the rate of 29·87 per cent., if this rate be maintained it will double itself in about five years, the next Census would therefore record a population of 60,000 souls.

11. The

11. The following table shows the number of persons who arrived in and departed from the colony during the year 1861, compiled by the Collector of Customs, from returns kept at the shipping ports of Brisbane, Maryborough, Port Curtis, Rockhampton, and Port Denison. It further distinguishes the port of arrival, the sexes, and the ages, so far as being above or below the age of fourteen. I have also added a column showing the increase to the population arising from excess of Births over Deaths, and a column showing at one view the total increase from all ascertainable causes.

1861.

	ARRIVALS.					Total Arrivals.	DEPARTURES.					Total Departures.	Excess of Arrivals over Departures.	Excess of Births over Deaths.	Total increase to population in the year 1861.	
	Brisbane.	Maryborough.	Port Curtis.	Rockhampton.	Port Denison.		Brisbane.	Maryborough.	Port Curtis.	Rockhampton.	Port Denison.					
Males above 14 ...	3,023	217	175	509	16	3,940	977	90	28	276	...	1,371	2,569	} Males.
Males under 14 ...	340	28	104	43	3	518	65	7	8	6	...	86	432	
Total Males...	3,363	245	279	552	19	4,458	1,042	97	36	282	...	1,457	3,001	382	3,384	} Females.
Females above 14	1,039	67	17	162	6	1,291	217	28	1	34	1	281	1,010	
Females under 14	349	22	21	34	3	429	49	12	2	8	...	71	358	
Total Females...	1,388	89	38	196	9	1,720	266	40	3	42	1	352	1,368	542	1,909	
Total persons ...	4,751	334	317	748	28	6,178	1,308	137	39	324	1	1,809	4,369	924	5,293	

There exists at present no means of taking an account of inland arrivals or departures, but I have no doubt that they would show a balance in favor of the colony. From the above table it appears that the increase, arising from the excess of arrivals over departures, was at the rate of 15·03 per cent. on the population of 31st December, 1860, and that in this increase, the sexes were in the proportion of nearly 46 females to 100 males.

12. Included in the above return of arrivals and departures, are the immigrants landed from the two ships, "Mangerton" and "Persia," in number 799: males, 422, females, 377, that is, rather more than 89 females to each 100 males; comparing this proportion with that of the total increase of 46 females to 100 males shows how much the intercolonial arrivals tend to continue the disproportion of the sexes; deducting the European immigrants, the proportion of females to males, of intercolonial arrivals, is only 38 and a fraction of the former to 100 of the latter. The proportion of females to males, on the 31st December, 1859, was 66 females to 100 males; the proportion on the 31st December, 1860, was also 66 to 100; the proportion on the 31st December, 1861, was only 65 females to 100 males. It is not satisfactory thus to see the disproportion of the sexes growing larger, it is a serious social evil, and one which there is reason to fear will increase, unless checked by the introduction of a large proportion of female immigrants from Europe; the tendency of the intercolonial immigration is yearly to diminish the proportion of females; the smaller centesimal proportion which the Births last year bore to the whole population may probably be referred to this cause.

13. The following table gives the number of Births registered in each district of the colony for two years ending 31st December, 1861, distinguishing between the sexes and showing the numerical and centesimal increase in the Births registered in the latter year over those registered in 1860.

BIRTHS.

DISTRICT.	1860.			1861.			Increase.	Increase per cent.	Proportion of Females to each 100 Males born in the year 1860.	Proportion of Females to each 100 Males born in the year 1861.
	Males.	Females.	Total.	Males.	Females.	Total.				
Brisbane ...	209	173	382	248	206	454	72	19·63	82·77	83·06
Ipswich ...	167	163	330	154	174	328	a dimi	nution	97·60	112·99
Warwick ...	63	61	124	61	60	121	do.	do.	96·82	98·36
Drayton ...	49	61	110	74	68	142	32	29·10	124·49	91·89
Dalby ...	40	43	83	53	35	88	5	6·02	107·50	66·04
Condamine ...	15	16	31	18	27	45	14	77·77	016·66	150·00
Gayndah ...	39	20	59	46	40	86	27	45·76	51·29	86·96

Port Curtis ...	7	5	12	12	5	17	5	41·66	71·43	41·66
Rockhampton ...	29	24	53	35	29	64	11	20·75	82·76	82·86
Kennedy
TOTAL ...	646	590	1,236	739	684	1,423	187	15·13	91·61	92·56

14. It appears therefore that comparing the two years 1860 and 1861, there is an increase in the number of Births registered in the latter year in every district except two, and a total increase in the colony, of 187, being at the rate of 15·13 per cent. on the number born in 1860. In 1860, the Births registered were in the proportion of 4·25 per cent. to the whole population estimated to 31st December 1860. In 1861, their proportion was 4·14 per cent., also estimated to 31st December, 1861. In the former year 91·61 females were born to every 100 males. In the latter year 92·56 females were born to every 100 males.

15. The result of a comparison between the above table and the table of Deaths given at folio 6, is to show first, that the number of Births exceeded the number of Deaths by 924; second, that although from the above table there were only 92 females born to each 100 males born, still that the female part of the population increased more rapidly than the male, in consequence of the far greater proportion of male deaths, namely, 251 males to each 100 females. The numerical increase of females was 542, of males 382. In proportion to the population of 31st December, 1860, the former is 55 per cent. greater than the latter.

MARRIAGES.

THE following table shows the respective number of MARRIAGES registered in every District during the two years 1860-1, and the religious rites according to which they were solemnized.

Year and District.	Church of England.	Church of Rome.	Presbyterians.	Wesleyan Methodists.	Independent.	Baptists.	Lutheran.	Congregational.	Registration Office.	Total, 1860.	Total, 1861.

* One unspecified in Brisbane being added.

17. This table brings to light a few curious facts, such as the following:—The total number of Marriages in 1860, was, 278; the total number of Marriages in 1861, was, 320: there is therefore an increase of 42 in the number. In 1860, the number of persons married were in the proportion of 1 to every 52 of the total population, estimated to the 31st December, 1860; in 1861, of 1 to every 53 of the total population, to the same day of 1861.

18. It is singular that the above increase in the number of Marriages should arise almost entirely in the district of Brisbane, for if the numbers be calculated exclusive of Brisbane, there is only an increase of two in the remainder of the colony. In Brisbane, the Church of England has solemnized the same number each year, has lost ground considerably in Ipswich, but has more than regained it in all the other districts. The Church of Rome has gained in Brisbane, Ipswich, Gayndah, and Maryborough, but has lost in the other districts. The Presbyterians have gained largely, in Brisbane and Ipswich, but lost elsewhere. As might be expected from the greater number of clergymen of various denominations now settled in the colony, the number of Marriages performed at the Registration Offices has diminished. The largest centesimal increase is in the Church of England, viz.: 40·35

viz. : 40·35 per cent. on the number registered in 1860. The only denomination in which the number registered in 1861 is less than the number registered in 1860, is the Wesleyan Methodists.

19. TABLE showing the Number of Persons Married of each Religious Denomination who signed the Marriage Register with a mark, and distinguishing Districts and Sexes for the two years 1860, and 1861.

TOTAL...	17	27	15	30	4	4	2	5				4	4	1	2		1	1	3	7	1	48	80	128		

20. From the above table it appears that the number of persons who signed the marriage register in the year 1860 with a mark were in the proportion of 18·88 per cent. to the total number of persons married in that year, and in the following year, 1861, in the proportion of 20·00 per cent., if this is any test, education is not improving. In the former year 67 per cent. of those signing with a mark were females, in the latter year they were in the proportion of 62 per cent. In all the three most numerous denominations, *i. e.*, Church of England, Church of Rome, and Presbyterian Church, the increase in number of marksmen and of markswomen is beyond its fair proportion.

21. The following table exhibits at one glance the results of the two last years marriage registrations.

DENOMINATIONS.	1860.			1861.		
	Number married.	Number who signed with a mark.	Per centage who signed with a mark.	Number married.	Number who signed with a mark.	Per centage who signed with a mark.

Port Curtis ...	7	...	7	7	...	7			...	4	25	
Rockhampton ...	33	4	37	34	8	42	{ 5	3	7	10	107	
Kennedy	6	...	6			
TOTAL ...	321	157	478	356	143	499	21	4·39	95	150	245	2,414

23. On examining the analysis of causes of Death in the Appendix, it is impossible to avoid being struck with the large proportion of Deaths, 119, arising from external causes, such as accidents, suicides, murders, &c., &c., they actually form 23·85 per cent. of the total Deaths from all causes, by far the greater number of these arising from any one case are from drowning, namely 42;—is not intoxication the principal cause of most of these deaths? The large number of Deaths of Children must also attract attention, 177 having died under two years of age, being 35·47 of the total number of Deaths registered in the colony.

24. The per centage of Deaths of Children under two years of age appears by the Brisbane tables to be 41·66, and by the Ipswich tables to be 44·44 of the total number of Deaths in each place; it would not be safe from these figures to jump to any conclusion that these towns are more unhealthy for children than the other districts of the colony, for it must be borne in mind that a very much larger proportional number of children of the above age are to be found in them than in any other part of the colony, naturally therefore a larger proportional number of Deaths occurs among them: still, however, there is no doubt that the deaths of children all throughout the colony is larger than it ought to be. May not this also be attributed to the intemperate habits, not of the children who suffer, but of their parents?

25. The following table compares the number of Births with the Deaths that have occurred in the year 1861, and shows the increase to the population that has arisen from the greater number of the former, also the centesimal proportion of Births to each 100 Deaths, and of females born to each 100 males born :—

1861.

DISTRICT.	BIRTHS.			DEATHS.			Excess of Births over Deaths.	Centesimal proportion of Births to each 100 Deaths.	Centesimal proportion of Females born to each 100 Males.	Centesimal proportion of Females died to each 100 Males.	Excess of Births over Deaths of Males.	Excess of Births over Deaths of Females.	Total excess of Births over Deaths.

TOTAL ...	739	684	1,423	357	142	499	924	382	542	924

26. From the above it appears that there occurred 35 Deaths to each 100 Births ; that 92 females were born to each 100 males ; that 38 females died to each 100 males ; that 51·93 of the total Births are males ; that 71·54 of the total Deaths are males ; that 41·34 of the total increase are males ; and 58·66 of the total increase are females ; the increase of females is, therefore, 17·32 per cent. greater than that of the males.

27. The following table is given to enable a comparison to be drawn between the infantine mortality of the two years, 1860 and 1861.

DEATHS OF CHILDREN.

DISTRICT.	1860.			1861.		
	Below 2 years.	2 and under 5 years.	Total, below 5 years.	Below 2 years.	2 and under 5 years.	Total, below 5 years.
Brisbane	68	10	78	59	9	68

TOTAL	179	29	208	169	19	188

28. It is satisfactory to observe from the above that although the population has increased, the number of Deaths of Children has slightly diminished : it still seems however disproportionately large, both as regards the population and the total deaths. The proportion to the population of 31st December, 1860, was, under 2 years, '61 per cent. ; under 5 years, '72 per cent. The proportion to the population of 31st December, 1861, was, under 2 years, '49 per cent. ; under 5 years, '54 per cent. The proportion to the total deaths in 1860, was, under 2 years, 37·45 per cent ; under 5 years, 43·51 per cent. The proportion to the total Deaths in 1861, was, under 2 years, 33·87 per cent. ; under 5 years, 37·67 per cent. The districts which show the most decided improvement are those of Brisbane and Warwick ; there is no very marked difference in any of the others.

29. It is with great pleasure that I observe a considerable diminution in the number of unspecified causes of Death ; in 1860, with a smaller number of Deaths, 34 are registered without the cause of Death being stated, in the last year, with a larger number of Deaths to record, only 21 are registered without the cause being stated.

30. In conclusion, I beg most respectfully to draw your attention to the unsatisfactory state of the several registration divisions of the colony, their boundaries are vague—in some cases unknown—and the area of many of them far too large ; this remark I submit applies more or less to all the other divisions of the colony. The publication of a reliable map showing, where possible, the various divisions of the Colony into Counties, Parishes, and Municipalities, also showing the boundaries of the Electoral, Registration, Police or Commissioners' Districts, would be of great use, and will I think be found necessary, before any attempt can be made to amend them.

I have the honor to be,

Sir,

Your most obedient Servant,

F. O. DARVALL,

Registrar-General.

APPENDIX TO REGISTRAR-GENERAL'S REPORT
FOR THE YEAR 1861.

TABLE No. 1.

SHOWING the Number of BIRTHS, MARRIAGES, and DEATHS, registered in the Colony of Queensland, during the year ending 31st December, 1861, and the Population on that day.
